**DESCRIPTION**

Patcher™️ R4HT is a polymer ceramic composite chemistry incorporating an advanced proprietary blend of ceramic additives and fibrous composite within an advanced hybrid epoxy resin. The matrix is designed to achieve maximum build and strength to repair metal loss, fill deep pits, create coves, reface flanges and manway doors. The adhesive characteristic and strong internal cohesive strength allows this material to be used as a cold weld repair product for fast and tenacious metal to metal bonding. This is a two part system, 100% solids, solvent free, zero VOCs technology. Patcher products are short pot life, fast drying pastes designed to be applied by trowel or flexible spreaders.

**SUGGESTED USES:**

**PHYSICAL PROPERTIES**

- **Color:** Dark gray (will darken with elevated temperature exposure)
- **Pot Life at 77°F:** 20 minutes
- **Pot Life at 90°F:** 10 minutes
- **Application Temperature:** 12°C (55°F) and 32°C (90°F).
- **Dry to Touch at 77°F:** 4 hours
- **Cure Time:** 12 Hours at 25°C (77°F)
- **Min. Recoat Time at 25°C (77°F):** 4 hours
- **Max. Recoat Time at 25°C (77°F):** 24 hours
- **Coverage:** 1604 sqft/gallon/mil

MIXING INSTRUCTION

This is a two-component system with a mix ratio of 2:1 by volume. Prior to mixing, components A Resin and B Hardener should be at room temperature 21°C(70°F) and 32°C(90°F). Pre mix Resin Part A and hardener Part B individually, be sure that any settled material at the bottom of the container is dispersed. With a plastic spreader place 2 parts of Part A to one part of Part B by volume onto a plastic work surface. Do not work with more than 1 pound of material at a time. Using a flexible spreader, mix Part A and Part B together for 2 minutes until a uniform color and consistency is achieved. Begin application immediately – no induction time in required.

SURFACE PREPARATION

1) Ensure that surface is clean, dry and uncontaminated. Proceed only if the substrate temperature is more than 5°F above the dew point temperature during surface preparation and coating application.
2) Abrasive blast clean with garnet or aluminum oxide (G40 or coarser). DO NOT USE steel shot or non-angular media.
   For steel surfaces, blast to a White Metal Blast (SSPC-SP5; NACE 1; SA 3):
   - minimum 3.5 mil profile for immersion and elevated temperature service.
   - minimum 2.5 mil profile for buried underground service;
   - minimum 1.5 mil profile for atmospheric service.

CLEAN-UP AND STORAGE

1) Use commercial solvents (Acetone, Xylene, Methyl Ethyl Ketone) to clean tools immediately after use.
2) Once the coating is dry, the material must be abraded off.
3) Keep containers tightly sealed and store upside down. For cleanup, M.E.K. or a 50:50 blend of M.E.K. and Xyloc.
4) Store between 10°C(50°F) and 27°C(80°F). DO NOT FREEZE. Use product within 12 months of receiving.

APPLICATION INSTRUCTIONS

Once mixed, the product may be applied by trowel, putty knife or brush. Work the material into the surface profile to completely wet out the substrate surface to ensure proper adhesion.
To improve the appearance of the material a low nap roller may be used to back roll the material. No reducing or thinning of the material is permitted.

SAFETY

Before using any products, please refer to the Material Safety Data Sheet (MSDS). Follow standard confined space entry and work procedures, if appropriate.
Wear eye safety protection, chemical resistant gloves. Use NIOSH approved respirator where mist occurs.
